## Safety Training and Reference Materials

Materials are used to maintain regulatory compliance, help improve productivity, and ensure safe working conditions. They provide quick reference through new pictograms and a safety data sheet (SDS) format for physical, health, and environmental hazards required by the HazCom Globally Harmonized System (GHS).

**Book/Booklets**—Provide information to help your employees navigate HazCom 2012/GHS's classification and labeling standards.

**Posters and Wallet Cards**—Easily convey the pictograms and safety data sheet (SDS) format for physical, health, and environmental hazards required by the HazCom Globally Harmonized System (GHS). Poster 45H627 includes a training card.

Description	Subject Matter	Language	H	W	Brand	Item No.	Pkg. Qty.

## Visual Lockout Procedure Authoring Service

Maintain standards, compliance, and workplace safety with clear, machine-specific lockout/tagout instructions tailored to your facility. This service provides a complete set of the required written shut-down procedures for equipment in your facility.

### How It Works

Brady field engineers gather machine-specific information and install color-coded energy tags on power sources at your site. The Type 1 procedures they produce have clear, step-by-step lockout instructions, equipment photos, and energy points, to help ensure employees can correctly and consistently lock out equipment to avoid unexpected electrical energization or startup.

### What You Get

A binder of laminated point-of-use procedures, along with digital copies and a standardized template for ongoing updates to maintain compliance with Lockout Tagout Standard 1910.147.

**Note:** A separate Visual Lockout Procedure Installation Service is available; contact your Grainger Representative for more information.

Procedure Qty.	Item No.
40	20X092
80	20X109
120	20X110
300	20X111
