Plastic	6	1 in	Orange	Brady	15Y527

Lockout Hasps

Lockout tagout (LOTO) hasps allow multiple technicians to each apply their own lock to prevent accidentally energizing equipment during service. The hasp is applied to a lockout, then one or more locks can be inserted into the hasp shackle holes. The last user to remove their lock gains access to the locked out energy source.

Standard hasps prevent access to a single locked out energy source. **Pry-resistant hasps** have tabs that prevent the hasp from being pried apart where tapering is a concern. **High-strength hasps** feature a pry-resistant hinged steel plate design for use in high security environments, such as prisons and healthcare facilities. **Labeled hasps** feature an integrated lockout tag, reducing the amount of materials for a job. **Dual-end hasps** have different-sized jaws on each end, for use on different-sized lockouts. **Nonconductive plastic hasps** reduce the risk of electric shock to a technician when locking out electrical equipment.

Group Lockout Boxes

Portable group lockout boxes can be carried to the lockout location to eliminate the need for workers to locate the box outside the working area. This can save worker time, especially in large facilities where lockout equipment can be stored separately from the workspace. **Wall-mounted group lockout boxes** install at a convenient access point so workers can easily locate the box. It also ensures the box isn't misplaced by workers who carry the box with them.
