Spill Containment Berms

- Support EPA Compliance 40 CFR 264.175
- New Pig models also Support Compliance 40 CFR 112.7 and 40 CFR 122.26
- Support SPCC Compliance

These berms are deployed on flat surfaces to contain leaks, spills, or washdown liquids. They help protect people from hazardous slips and falls, and keep liquids away from designated areas, machinery, and drains.

Spill berms and sections create long-term spill containment in different sizes or shapes. Kits include the components needed to build a complete spill berm. For indoor or outdoor use.

Drive-over spill berms allow vehicles to quickly enter and exit areas without having to manually lower the walls of the spill berm.

Collapsible spill berms have foam sidewalls that fold down to allow easy drive-in and out access. The sidewalls lay flat until liquid is spilled in the berm and then rise to accommodate the level of the liquid.
