

Cushion-Ease Interlocking Mat System

■ ¾ in thick
Interlocking mats have male/female edges so tiles are easier to match. Mat types can be cut to create custom configurations of solid surface and drainage mats. Nibs on the back increase flexibility to improve anti-fatigue properties over flat bottom mats. Beveled edging works with all mat styles in the same series.

Diamond Flex-Lok Interlocking Mat System

■ 1 in thick
■ Diamond plate surface
■ Vinyl material
These interlocking mats have a diamond pattern surface to provide traction and help prevent slips and falls. Post-in-hole attachments keep tiles secure. Standardized connections allow different tile types (antifatigue and drainage) to be connected in the same configuration.

Diamond Top Interlock Interlocking Mat System

■ ½ in thick
■ Diamond plate surface
■ Black rubber material
Interlocking mat tiles create linear runs in front of machinery or on walkways. Sometimes called

runners, end pieces have one interlocking edge that connects to a center piece. Center pieces have two interlocking connections that fasten to the end pieces to create the full length. End tiles have integrated beveled edges. Pieces cannot be cut to size.

Component	Edge Gender	Edge Style	Size (WxL)	Item No.
				Item No.
Antifatigue Mat End Tile	Male/Female Single Side	Beveled	31 in x 28 in	5W779
Antifatigue Mat Center Tile	Male/Female Opposite Sides	Straight	31 in x 28 in	5W778
Antifatigue Mat End Tile	Male/Female Single Side	Beveled	31 in x 36 in	3UM39
Antifatigue Mat Center Tile	Male/Female Opposite Sides	Straight	31 in x 36 in	3UM40

Cushion Connect Interlocking Mat System

■ 1 in thick
■ Mat tile has circle shaped holes
Drainage mat has integrated connectors that snap together to create a custom configuration. Large drainage holes have raised edges to quickly drain liquids and provide a slip-resistant surface. Nubs on the back flex to alleviate strain when standing for long periods of time. Beveled edging can be added as needed.

ESD Mats

Nonconductive (switchboard) mats protect workers from electric shock. **Antistatic and conductive mats** dissipate static electricity from individuals when standing on them; conductive mats accomplish this quicker. These mats protect and shield sensitive equipment from damage. The attached grounding cord on 5MDN2 to 5MDN4 provides extra protection. **Drainage mats** are reversible for longer life.
