Key-Controlled Scrolling Combination Padlocks

- 4-digit resettable combination   ▪ General security

Padlocks open by turning a scrolling mechanism to the correct combination but can also be opened using a key if a user forgets the combination. They are typically used in schools. Control keys are sold separately and must match the control key code specified by the padlock.

Luggage Padlocks

- Standard shackle   ▪ General security   ▪ Resettable

Padlocks secure access to personal property in luggage, briefcases, and travel bags. They open by turning a scrolling mechanism to the correct combination, and they don't require a key. 2RUF9 Password Plus uses letters, numbers, and symbols for custom passwords. 38W808 and 38W810 are TSA-approved and have a side window for viewing the combination, so TSA screeners can inspect and relock baggage without damaging the lock.

Cable Locks, Security Cables, and Security Chains

Cable Locks—Flexible cables wrap around equipment and an anchor point and lock with a key, combination, or both. They are used with items that cannot be secured with a padlock. Vinyl coating helps prevent scratching. 6JD76 and 6JD75 have integrated locks.

Security Cables—Flexible cables wrap around large or bulky items like fences and are secured with a padlock. 3NY54 and 3UU68 Python patented locks hold cable at any position.

Braided steel wire cable has looped ends for use with U-locks or padlocks. Vinyl coated.

Security Chains—Tough chains are secured with a padlock to restrict access to high-value items. They are enclosed in a nylon sleeve that protects the chain from damage.

Removable Steel Shackle Padlock—U-shaped lock has double-locking hardened steel removable shackle, heavy-duty cable and chain, and 7-pin tubular cylinder.
