Precision Steel Parallels & Sets

These precision steel parallel sets are comprised of rectangular blocks with highly parallel, square dimensions within tight tolerances. When a vise is too deep to hold a workpiece, parallels are commonly used to position the workpiece for accurate cutting by creating a parallel and flat base. These parallels offer certainty about the alignment of the workpiece rather than requiring guesswork and constant adjustments with a level, protractor, or indicator.

Vertical 463H36

Details on page A1.

Single-Function Digital Scale Units with SPC Output

Linear scales with SPC output move along a beam and display the distance traveled on a digital display. They are available in horizontal or vertical designs to measure distances. They measure absolute positioning, zerosetting for relative positioning, and have built-in low battery alarms. The also have direction changeover to reverse the direction of measurement, programmable presets to display a specific value, and data hold. They are commonly used for table positioning, guill positioning, and tool presetting.

Starrett +INSIZE+ **Inspection Surface Plates**

Grade B Toolroom 6PCV6

6PCX2

Grade B Toolroom Grade surface plates are made to a precise tolerance of flatness and repeatability suitable for smaller QA and inspection jobs on the shop floor where metrology lab-level sensitivity is not a factor. Grade A Inspection Grade surface plates are built to a medium tolerance of flatness and repeatability. They have either four flat edges or ledges on two sides that create an overhang for clamping, supporting, and securing objects. Grade AA Laboratory Grade surface plates are made to the best tolerance of flatness and repeatability. These plates are thicker than lesser-grade plates, so they have less deflection and are intended for permanent installation.

Optical Comparators

IOX Magnification lens included

Horizontal optical comparator are suitable for shaft parts or heavy workpieces with large volume. The main axis of the comparator is perpendicular to the plane of the projection screen. Vertical optical comparators are suitable for flat parts or smaller workpieces. The main axis is parallel to the plane of the screen.
