

Duct Hose for Dust

Resistant to oils, abrasion, moisture, ozone, and UV rays.

These duct hoses are primarily used to blow, vacuum, or exhaust dust. Some types of this duct hose may also be used for moving other materials, such as fumes.

Polyester fabric with neoprene coating hoses are flame-retardant and self-extinguishing. They are suitable for positive- or negative-pressure movement of light particles or materials. Hoses with thermoplastic rubber coating can withstand higher temperatures than neoprene-coated hoses.

Polyethylene duct hoses have a textured inside so that it fluffs the insulation as it is blown. They also provide excellent crush resistance.

PVC hoses are flexible and can make tight bends. They have a smooth interior that prevents material build up.

HI-TECH Ontinental

High-strength fiber-reinforced

types can be used as conduit to cover and protect cables. Light-duty types can withstand both pressure and vacuum. Laminate polyester types are flame-retardant and self-extinguishing.

Thermoplastic rubber hoses feature a smooth interior that prevents material build-up. They provide excellent crush resistance and are suitable for applications with a wide temperature range. Hoses that are FDA-certified are made from materials that are approved for contact with food. No cements, glues, or adhesives are used in the manufacturing of these hoses.

VinvI laminate hoses are flameretardant and resist damage from mildew. They are also impervious to leakage from most oils, water, chemicals, and grease.

HI-TECH DURAVENT

Duct Hose for Wood Chips & Plastic Pellets

Resistant to abrasion and oils Primarily used to move wood chips and plastic pellets. The smaller a duct hose's bend radius, the more flexible the hose is.

FDA-certified urethane hoses are made from FDA-certified materials for contact with food

Polyurethane with wire helix hoses feature wire helix reinforcement to prevent flex fatigue.

Static-dissipative urethane with helical wire hoses help prevent sparks that could ignite dry materials inside the hose.

Thermoplastic urethane hoses remain flexible at low temperatures and resist moisture.

Urethane with smooth interior & ABS wear strip hoses feature a smooth interior that prevents material build up and are used to replace EPDM hoses with thicker walls.
