**Multipurpose Barbed Hose Fittings**

■ Hose barb x MNPT connection  
Designed for low-pressure suction and discharge service in transporting air, water, and chemicals. Threaded end is same size as hose. Barbed combination nipples have raised ridges (or barbs) on one end that grip the inside of hoses to hold them in place. Rigid barbed hose fittings connect hoses to pipe in multipurpose hose assemblies. **316 Stainless Steel fittings** have higher corrosion resistance than other types of stainless steel hose fittings. Used in saltwater and chlorine environments. **Aluminum and Carbon Steel fittings** are suitable for low-pressure applications in the food and beverage, marine, and chemical processing industries. **Steel fittings** are plated to resist corrosion. **Polypropylene fittings** have good resistance to abrasion and chemicals. Can be used in fertilizer, herbicide, and insecticide handling applications, as well as for industrial applications, such as waste, saltwater, and cooling water handling.
