## Freestanding Hand Sinks & Hand Wash Stations

Freestanding stainless steel sinks are supported by four legs, feature a deep bowl for scrubbing and rinsing, and allow clearance below the sink for cleaning or storage purposes. These all-purpose sinks are found in schools, factories, and lavatories.

**Sinks With Faucets**—Sensor models have an AC- or battery-powered sensor to activate water flow and a mixing check valve. All faucets are gooseneck with single hole installation, except wristblade handles are 8" center. 2 gpm flow rate.

**Sinks Without Faucets**—Sinks have openings for drainage and additional 1/8" holes in the splash for mounting faucets.

## Wash Fountains

Large wash basins allow several people to simultaneously wash their hands. Water spray is activated by foot controls, push buttons, or touchless sensors, which shut off automatically. Wash fountains provide more hand washing stations per square foot than conventional lavatory sinks and can accommodate more users in high-traffic areas, such as restrooms in schools, stadiums, and airports. **Foot Pedal-Operated Wash Fountains** are hands-free and activated by users stepping on a large foot pedal or bar. Stepping off the pedal or bar stops the flow of water. **Push Button-Operated Wash Fountains** deliver metered water for washing hands then automatically shut off to save water. **Sensor-Operated Wash Fountains** are hands-free and activated by a sensor that automatically starts and stops the flow of water.
