

## Toilet Seats

Bolt onto a toilet bowl and can be lifted on their hinges for cleaning and full access to the bowl. Oval or circular rings should match the bowl shape to keep the seat stable. Use seats on new installs or for replacement.

**Standard Elongated**—Elongated (oval) seats are about 2" longer from back to front than standard round bowls.

**Standard Round**—Fit round toilet bowls and are generally more comfortable for smaller users.

**Elongated Lift**—Taller than standard elongated seats to make it easier for people to lower and lift themselves off toilet. Assists people with mobility issues.

**Child**—Smaller seats and typically found in schools, pediatric hospitals, and daycare facilities.

**Elongated Safety-Arm**—Elongated (oval) seats with support arms for people to lift or lower themselves when using the toilet. Arms attach to underside of seat and extend from sides to provide grab bars for lifting and balance. Used in rehab facilities, hospitals, nursing homes, and senior-living centers.

**Round Lift**—Taller than standard round seats to help people get on and off the toilet. Designed to assist people with mobility issues.

**Oversized Toilet Seats for Round or Elongated Bowls**—Universal fit with a higher weight capacity to support heavy users. The wider-than-standard surface area fits any bowl shape. Commonly used on toilets for bariatric patients in hospitals and medical facilities.
