

Bottle Filler Water Filters

- Carbon filter media
- Flow rate: 1.5 gpm

Bottle filling stations use these water filters to remove contaminants and improve the quality of drinking water with no unpleasant smell or taste.

Reverse Osmosis Appliance Water Filters

Reverse osmosis uses a multistage process including prefilters and semi-permeable membranes to filter water for drinking and appliances. Most bottled water is processed using reverse osmosis.

Appliance Water Filter Head, Series 3M VH3

- Max. pressure: 125 psi
- Max. temp.: 100°F
- Filters: 5 micron rating

Head allows the operator to adjust the level of filtration to accommodate various types of products for custom water quality control. It works in food service and vending applications including ice machines, fountain beverage dispensers, coffee and espresso machines, hot drink vending machines, and steam cookers.

Beverage Machine & Ice Machine Filtration Systems

- Max. pressure: 125 psi
- Max. temp.: 100°F

Effective, easy-to-install solutions that meet the volume, water clarity, and maintenance expectations in most food service applications. NSF certified. Filtration systems install new or replace existing filtration systems.

Beverage Machine Filtration Systems— Eliminate contaminants and improve water quality.
Ice Machine Filtration Systems— Reduce contaminants and improve water quality to produce purer ice cubes.
