Faucet Aerators & Outlets

• OEM quality

Connect to the end of a faucet spout to direct the water stream, minimize splashing in sink basins, and reduce water use. These parts are added to faucets for flow-control applications and used as replacements for aerators that block water flow, cause the water stream to sputter, or allow dripping from the spout.

Unthreaded Faucet Aerator Inserts and Flow Restrictors—Easily fit into faucet spouts.

Threaded Faucet Aerators and Flow Restrictors—Thread onto faucet spouts.

Faucet Outlet Adapters—Allow the faucet spout to be fitted with different types of aerators and adapted to suit different applications.

Faucet Aerator Installation Tools—Aid in the installation and removal of clogged faucet aerators. Tools fit a compatible aerator and faucet without causing damage.
