Pressure-Assist Elongated Toilets and Tanks

■ White vitreous china
Toilets provide a strong flush like tankless toilets without requiring a high-pressure water supply. They're typically used in high-traffic settings where water pressure is too low for a tankless toilet. These fixtures have a pressure vessel within their water tank that pressurizes air and releases it with the water for a high-powered flush.

Floor-Mount Toilet Bowls with Back Outlet—Back outlet fastens to the floor and has a back connection to a wall waste line.

Floor-Mount Toilet Bowls with Bottom Outlet—Bottom outlet fastens to the floor and has a bottom connection to a floor waste line.

Toilet Tanks—House the pressure vessel, flushing mechanism, and other working parts of the toilet. These fixtures have mounting holes for attaching to a pressure-assist toilet bowl. Cover keeps dust and debris out of the tank.

SLOAN FLUSHMATE

Flushmate System

Pressurized flush eliminates double flush and clogs and saves water. Fewer moving parts extends service. If toilet tank includes a flush handle, Handle Replacement Kit 30KE38 is also required. Flush Cartridge 1ATP5 is a replacement part for most Flushmate systems.

Note: Flushmate system is not sold as a retrofit component for a gravity-fed toilet.

Intelli-Flush 2VRN9—Enables touchless, electronic sensor operation of existing Flushmate units to reduce the spread of bacteria and recurring odors. Include wall-mounted sensor, flush module, battery pack, batteries, override button, and chrome trim.
