Urinals *AmericanStandard*
SLOAN. ZURN

- White vitreous china
- Flush valve sold separately, see Grainger.com

Wall-mount flush-valve urinals with top spud are off-the-floor fixtures that allow thorough cleaning, connect to a wall waste line, and work with an exposed flush valve for unblocked access during maintenance. These fixtures have a lower weight capacity than floor-mounted fixtures, but provide a streamlined look and full access for cleaning the floor and urinal surfaces. Includes back opening for waste line and a spud atop the fixture for connecting to a flush valve (flushometer). Meet all ANSI and ASME water conservation requirements.

* WaterSense Certified. † Ultrahigh efficiency.

Waterless Urinals

Conserve water by eliminating liquid waste without flushing. They connect to a wall waste line and rely on gravity to direct urine into the drain, so there's no need for a flushing mechanism. These water-free urinals use a trap or cartridge with a layer of sealant that blocks odors from rising out of a waste line while allowing urine to pass through. Use to reduce water consumption in dry climates and other areas where water is scarce. WaterSense Certified.
