**Lead-Free Dielectric Unions & Flanges**

Polysulfone insulator material  
Pipe fittings for dissimilar materials allow incompatible materials to be joined together safely, and provide insulation between two different materials to avoid electrolysis that leads to corrosion and pipe failure.

**Plastic to Metal Transition Fittings, Schedule 40, 80 & SDR-11**

■ Metal side NPT, except 5UED7 and 5UED8 are compression

Fittings minimize any stress problems found with metal-to-plastic piping system transitions when connecting heat exchangers, flow meters, and other metal-ended, male-threaded instruments. They are also used when expanding old metal systems with plastic, or installing new plastic systems where metal is required for part of the installation.

**SCHEDULE 40:** Schedule 40 CPVC has thicker walls than Schedule 10, but not as thick as Schedule 80.
