Panasonic. Speed Control and Switches

Fit a single-gang box. **Speed Control** adjusts sound, speed, CFM, and energy usage. Faceplate not included. **Switches** control fans and lights, except 6XAU2 is only for fan control. **Timer** operates as both a fan and light switch, and features programmable delay and ventilation settings.

Non-Insulated Flexible Ducts

- Max. temp.: 500°F
- Compressed length: 30"

Connect to HVAC ducts and direct airflow around obstacles and corners. Constructed of a thin sheet of aluminum folded like an accordion, allowing them to bend and flex around obstacles. They can move higher-temperature air and withstand more abuse than non-insulated air connectors. Due to their increased durability and how they transfer heat to their surroundings, they are commonly used as part of a combustion system exhaust in mechanical spaces.

Roof, Wall, & Soffit Vent Caps

Roof Caps have a weather hood that blocks rain and other debris from entering while also directing the exhaust gases in one direction along the mounting surface. They install onto the ends of roof exhaust vent pipes or ducts.

Rain Caps prevent rain from entering under normal conditions and exhaust gases and particulates from re-entering the vent after being exhausted. Connect to the ends of roof vent pipes and have louvered vent slots on their sides that angle down toward the mounting surface. **Wall and Soffit Vent Caps** protect against weather and pest intrusion. Feature hoods or caps that block rain from entering the vent while allowing air to flow freely through the connected duct.

Note: Additional Rain Caps are found on page 2968.

Dryer Booster Inline Duct Fans

- Duct: 4" dia.
- Nominal voltage: 120V AC

Help to increase clothes dryer efficiency when long duct runs are involved. They install into the existing ductwork and help to move the dryer exhaust through the duct network. Sensors activate the fans when they detect the connected dryer is in use. For use where dryer duct runs exceed 25 ft. equivalent.

Soler & Palau have a totally enclosed motor with Class F insulation and backward inclined wheel to overcome extreme pressure in tough installations. **Tjernlund** handles up to 150 equivalent ft. of duct: straight duct length plus 5 ft. per elbow. Auto-syncs with clothes dryer. Horizontal or vertical duct connection. External motor and lintproof blower.
