Box Air Filters

For air filter gasketing, see page 2927 or go to Grainger.com.

Rigid frame can withstand difficult operating conditions such as variable air volume, turbulent airflow, and high humidity. Tightly pleated filter media traps particles with high efficiency and are commonly installed in HVAC systems in offices, hospitals, museums, and electronics manufacturing.

Air ****** Handler ** Minipleat Air Filters with Gasket

- Rugged plastic frame
- UL Classified

Gaskets provide sealing to minimize air bypass and a tightly pleated filter media that traps particles with high efficiency. Filters have a rigid frame that can withstand difficult operating conditions such as variable air volume, turbulent airflow, and high humidity. They are commonly installed in HVAC systems in offices, hospitals, museums, electronics manufacturing, and similar applications.

The filters' rigid frame can withstand fluctuations in airflow, making them ideal for variable-volume HVAC systems. Metal grid and media stabilizers maintain pleat configuration. Filters are for use in commercial buildings, schools, hospitals, arenas, and industrial installations

Rigid frame and aluminum dividers help filters hold their shape under difficult operating conditions, such as variable air volume, turbulent airflow, repeated fan shutdown, high temperatures or humidity, or intermittent exposure to water. For use in health care, food processing plants, pharmaceutical manufacturing, computer equipment rooms, and electronic assembly areas.
