## Metal Conduit, Elbows, and Nipples

UL Listed.

**Electrical Metallic Tubing (Thin Wall)**—Unthreaded metallic tubing provides easy bending, cutting, and joining. Resists flattening, kinking, and splitting to help create smooth continuous raceways for faster wire pulling.

**Intermediate Metal Conduit (IMC)**—Threaded conduit (unless noted) is as strong as rigid conduit, and weighs up to 30% less. Suitable for use in hazardous locations. Larger interior diameter enables faster wire pulling.

**Rigid Steel Conduit (GRC) (Heavy Wall)**—Threaded conduit resists impact and provides radiation protection and magnetic shielding.

**Rigid Aluminum Conduit**—Approximately 1/3 the weight of rigid steel conduit. Resists most corrosive atmospheres; won't leave discoloring stains or streaks. Cuts, bends, and threads easily without special tools.
