Air Handler®
Ring Panel and Link Air Filters

- MERV 8
- Synthetic media
- UL Classified

Consist of layered polyester filter media with a metal wire that is heat-sealed around the inside edges to hold the media open. The filter media wraps around the wire to ensure a positive seal when the filter is installed so that air doesn't bypass the filter. Unlike standard panel air filters they don't require clips or latches to seal them in place. Suitable for high moisture or high air flow applications and commonly used in commercial buildings, schools, universities, and areas where surface finishing is performed.

Air Handler®
Washable Grease Collection Baffle Air Filters

- Self-draining; handles included
- UL Classified

Metal air filters are washable, reusable, and have a metal frame and metal mesh filter media. They're installed in self-draining style commercial kitchen hoods to trap airborne grease before it reaches the exhaust fan, and to prevent grease from accumulating on the fan and the exterior building surface where the fan vents. Permanent filters balance airflow evenly throughout exhaust hoods in commercial kitchen applications and can be used to replace mesh filters in older hoods.

Air Handler®
Washable Mesh Air Filters

- UL Classified

General use mesh filters have a metal frame, metal mesh filter media, and prevent large airborne particles such as dust, leaves, and pests from entering and damaging HVAC equipment. They can be vacuumed, sprayed, or run through a dishwasher for cleaning and reused. Optional handles attach to filter. Air filters are suitable for use with Carrier, MicroMetl, Trane, York, and other systems.

2GGR5

Aluminum—Rustproof; constructed of multiple layers of corrugated aluminum wire mesh in a heavy-gauge aluminum U-channel frame.

Galvanized Steel—Constructed of multiple layers of expanded corrugated steel mesh and a galvanized steel frame. Not recommended for outdoor applications.

Air Handler®
Washable Range Hood Mesh Air Filters

- Aluminum media and frame
- UL Classified

These washable and reusable filters install in kitchen range hoods to remove odors and trap grease before it reaches the exhaust fan. This prevents grease from accumulating on the exhaust fan. Suitable for use with microwave range hoods and both ductless and ducted exhaust hoods. Replace OEM filters for popular brands.
