

Portable Gas Tank-Top Radiant Heaters

- Fuel type: propane Heaters mount on standard DOT 20-lb LP cylinders, making them ideal as a temporary heat source in cold buildings, garages, and jobsites. No electricity required.

Portable Gas Table-Top Heaters

- Fuel type: propane
- Matchless piezo ignition

Heaters are placed on work surfaces or floors to provide supplemental, close-up warmth, making them ideal for personal heating.

Portable Gas Patio Heaters

Provide 360° radiant heat for restaurant, hotel, and retail patios as well as other outdoor locations. Heaters have a wide, angled canopy-style reflector that directs heat downward, keeping people warm at ground level. They can be moved around as heating needs change. Models conceal LP cylinders inside a cabinet in the base.

Portable Gas Convection Can Heaters

- Matchless piezo ignition
- Heaters use convection heating to create currents that warm and circulate the air. They're typically used in construction applications and are placed in the center of a small area to provide 360° supplemental heating.

Portable Gas Radiant Can Heaters

Heaters use infrared radiant heating, which is absorbed by people and objects to warm them faster and more efficiently than convection heaters that warm the ambient air. They're typically used in construction applications and are placed in the center of a small area to provide 360° supplemental heating.
