Hospital Grade Receptacles

■ 125V AC

These hospital grade receptacles are designed to withstand the severe conditions unique to hospital environments. Nickel-plated bypass contacts help increase contact pressure and lower operating temperature. Four-point grounding system provides redundant grounding for low resistance ground continuity, and thermoplastic polyester (RTP) back is tough and heat-resistant.

Note: To qualify for the hospital grade designation and use of the green dot symbol, UL requires product performance to specific levels. These levels form an established baseline below which no manufacturer can fall and still carry a green dot.

SNAPConnect II Wiring Devices

Suitable for use in commercial construction and in healthcare applications. Great for installations with potential for frequent device change-outs. UL Listed and CSA Certified.

Note: SNAPConnect II is not compatible with SNAPConnect. Please check Mfr. Model number before ordering.
