Digital and Analog Soldering/Desoldering Stations

- ESD-safe, protects sensitive components
- 120V, 60 Hz

DIGITAL SOLDERING STATIONS

481D58 provides accurate adjustment of hot air through brushless turbine. Designed with up to 5 presets that can be set to run automatically. 481D59 features front panel power switch, setback, lockout, temperature window, standby mode, auto shutoff, and LCD

display. 483N57 has standby mode, auto shutoff, intuitive navigation, password lockout, LCD, and lightweight soldering pencil.

ANALOG SOLDERING

Professional Grade—Heating elements are wound around steel spools, creating large reservoirs of heat and resulting in the ability to run longer seams, solder large joints, and a shorter thermal recovery time.
