**Corded Reciprocating Saws**

120VAC

Feature keyless blade clamp and rubber boot for superior gripping and operator comfort. Used in construction and demolition work to make fast, aggressive cuts in wood, metal, and nail-embedded wood. Corded reciprocating saws have longer run times and generally have more power than battery-operated tools. They are used in demolition, construction, metalworking, and other applications where precision is unimportant. Interchangeable blades are used to cut specific workpiece materials, such as wood or metal.
