Adjustable Wrenches

Adjustable jaws tighten or loosen a range of fastener sizes. **Valve Wheel End** wrenches grip the rims of hand-operated valve wheels to open and close valves. **Automatic Locking** wrenches lock on the fastener head once tightly adjusted. **Insulated** handles reduce fatigue and protect from electric shock. **Insulated Hammer Head** wrenches have a flat side for striking surfaces. **Insulated Nonsparking** wrenches won't spark during use in flammable environments. Iron-free and nonmagnetic, they are suitable for use with magnetic resonance imaging (MRI) equipment. **Lever-Locking** wrenches have a lever that locks jaws in place to tightly grip the fastener.
