

Bolt and Chain Cutters

Generate crushing force at their jaws to cut bolts, padlocks, chain, wire mesh, and other items.

Miniature—Fit into tight spaces and make cuts where standard-length cutters would be too long. They are used to cut thinner or softer materials.

Heavy-Duty—Tools maximize crushing force to cut higher-strength steel than general purpose cutters.

Insulated—Nonconductive handle grips reduce the risk of electrical arcing and protect against electrical shock if the jaws make accidental contact with live circuits.

Angle-Head—Have an angled head that sits flat against surfaces to make close, nearly flush cuts. They are used to trim wire fencing and shear off protruding nails and screws.

General Purpose Sets—Include different sizes to cut medium-strength steel chain, threaded rods, rebar, bolts, screws, nails, and wire.

Bolt Cutter Heads—Allow user to replace worn parts.

Multi-Tools

These multi-tools combine an assortment of tools into a single unit. They perform a range of functions for completing repairs and on-the-spot tasks without requiring a set of individual tools.

Folding Knives—The knife blades and other tools fold out for use; fold into the handle for compact storage.

Scissors—A screwdriver head is the primary tool while the multi-tool body has edges, slots, and cutouts for other functions.

With Fold-Out Pliers—Have a set of pliers and other tools that all fold out for use; fold together for compact storage.

With Slide-Out Pliers—Feature a set of pliers and other tools. The plier head slides into and out of the top of the handle while the other tools fold out for use; fold in for compact storage.
