

Assorted Pliers Sets

Used to equip workers with a set of pliers without the hassle of selecting individual tools.

Precision Pliers—Can perform electronics assembly and other detailed work with small parts and delicate components. They allow fine control and fit into tight spaces.

ESD-Safe Precision—Have handle grips that dissipate electrostatic charges and reduce the risk of damage when working near static-sensitive electrical components.

General Purpose—For use where insulated, ESD-safe, or other special use pliers aren't required.

Insulated—The non-conductive handle grips protect against electrical shock if the jaws make accidental contact with live circuits.

Standard Cushion				
4	Manual	6 in Wire Stripper, 8 in Diagonal, 8 in Combination, 8 in Long Nose	Westward	1YXJ5

Tongue and Groove Plier Sets

Feature jaws that lock into place at the desired setting, remain parallel to maintain grip, and are angled from the handles to increase leverage. Serrated jaw texture has ridges that improve jaw grip but may damage soft materials. Smooth jaw texture reduces the risk of marring plastics and soft metals. Sets avoid the hassle of selecting individual pliers.

Push Button—Releases the bottom jaw with the press of a button, so the bottom jaw can slide up or down without having to turn out from the top jaw. The jaws remain parallel to make faster, more precise adjustments than a traditional groove-joint mechanism.

Self Adjusting—Lever mechanism automatically moves the jaws as the handles are squeezed and tightens them around the object being gripped.

No. of Pliers	Maximum Jaw Opening	Overall Length	Jaw Texture	Grip Cushion Style	Brand	Item No.
