Precision-Cutting Pliers Erem®

Allow finer control and can fit into tighter spaces than larger pliers. Their slim tips cut closely against surfaces and slice through thin wire and small fasteners. ESD-Safe pliers can dissipate electrostatic charges, reducing the risk of damage to static-sensitive electrical components.

NIPEN R Xcelite[®] wind[®] Westward IPROTOL NIPTEC

Flush—Blades are extra sharp to leave a flat, smooth edge on materials. They are used to prepare materials for soldering. Tools make the finest cuts but tend to dull more guickly than standard- or semiflushcut pliers.

Semiflush—Leave a slightly pointed, pinched edge on materials. They make cleaner cuts but tend to dull more quickly than standard-cut pliers.

Standard—These pliers leave a pointed, pinched edge on materials. They make rougher cuts but typically stay sharper to make more cuts than flush- and semiflush-cut pliers.
