

Corded Drain Cleaning Tools

These corded tools allow long run times, maintain full power during operation, and have no batteries to recharge. They can remove blockages and clean drains more thoroughly and with less effort than manual drain cleaning tools. **Drain Guns** clear hair, sludge, and residues from short runs of small-diameter pipe in sink, tub, shower, urinal, and toilet drains. **Sink Machines** can clear blockages in sinks, tubs, or showers.

Corded Drum Machines

■ Include 1 cable

Drum machines unwind cable from their large drum and automatically rotate the cable to break through roots and blockages in floor drains and main sewer lines. **Corded Drum** maintain full power during operation, allow long run times, and have no batteries to recharge. They generate a spring-like tension in the cable to

penetrate blockages. **Wall-to-Wall Drain Cleaning** can clear the full inside diameter of pipe rather than pushing through a portion of the blockage. They move their cable at high speeds, spinning and expanding the chain knockers on the cable head to remove blockages and descale pipe walls. Machines are corded, except 54YG38 and 54YG31 require the use of a cordless drill (not included).

Corded Sectional Machines

These corded machines have no batteries to recharge, maintain full power during operation, and allow long run times. They use segments of cable that store separately from the machine body instead of feeding from an onboard drum, making them more compact to fit into tight spaces and lighter for transport up and down stairs or onto roofs. Sections of cable can be joined to get the desired length for short to long runs of pipe.
