Rivet Tool Accessories

Riveting Clamps—Reusable clamps can temporarily fasten materials together until rivets are set for a permanent hold. They clamp/unclamp as needed to act as standoffs in assemblies or position materials such as automotive body panels.

Replacement Nosepieces—Can replace worn nosepieces on rivet tools to restore their grip on rivets. Fit specific rivet tools and hold specific rivet types or sizes.

Replacement Jaws—Replace worn jaws on rivet tools to restore their grip on rivets. Fit specific rivet tools.

Die Sets for Solid Rivets—Attach to the U-shaped jaws of solid and tubular rivet tools and compress the rivet as the jaws squeeze together. Fit specific rivet sizes and head types and allow one tool to set different rivets.

Hand Nailers, Staplers, and Tackers

Staple Guns—Use to attach thin materials to joists, studs, and other framework or base materials.

Foam-Board Staple Guns—Can fasten PEX tubing to foam-board insulation when installing in-floor radiant heating.

Outward-Clinch Staple Guns—Drive raised-crown staples and turn the legs outward for a stronger hold than an inward or straight clinch. Guns can fasten faced duct board and wrap.

Plier Staplers—Have a lever-action bottom handle that increases leverage to set staples through thick papers, thin plastics, and cardboard.

Wire and Cable Staple Guns—Feature a wire guide that directs the staple legs around the wire or cable to secure it without damaging it. Guns are typically used with insulated staples.

Staple and Nail Guns—Their top handle squeezes down toward the body to drive in the fasteners. Staple guns attach thin materials to joists, studs, and other framework or base materials. Nail guns set brads to secure base-boards and light trim or fasten thin plywood to framing.

Hammer Tackers—They operate by striking their head against surfaces to set staples into place. Tackers can secure roofing materials, housewrap, carpeting, tarps, and thin plywood.
