AMPCO® Nonsparking, Nonmagnetic, Corrosion Resistant Safety Tools Information

OSHA's new Hazard Communication Standard now requires nonsparking tools with flammable liquids. For our full offering of nonsparking hand tools go to Grainger.com® and search for "nonsparking tools."

Note: Static sparks can ignite flammable vapors, liquids, dusts and residues. The alloys used to make Ampco Safety Tools are highly conductive and must be grounded if there is concern for static-electric charge. AMPCO® and other copper based tools should not be used in direct contact with acetylene and some explosives such as amatol, azide salts, lead azide and DBX.

NONSPARKING

OSHA, NFPA, MSHA and other Standards Developing Organizations require and recommend the use of nonsparking tools where flammable vapors, liquids, dusts or residues are present.

NONMAGNETIC

Prevent accidents and protect property in military, medical, and electronics manufacturing locations. Excellent for use in highly sensitive magnetic equipment and in clean room environments. Meet ASTM F2503 and ASTM A342 standards.

CORROSION RESISTANT

Chemicals, acids and salt water over time diminish the effectiveness of steel tools. Ampco Safety Tools provide durability, longevity and personnel safety in severe corrosive environments.

Nonsparking Tool Kits

Kits contain nonsparking tools that should be used wherever there may be flammable or combustible dusts, liquids, powders, or residue present. It is recommended that nonsparking hand tools are kept in specially designed kits and inventoried routinely. This process helps to ensure that steel tools are not used accidentally by first responders.

Battery Tools

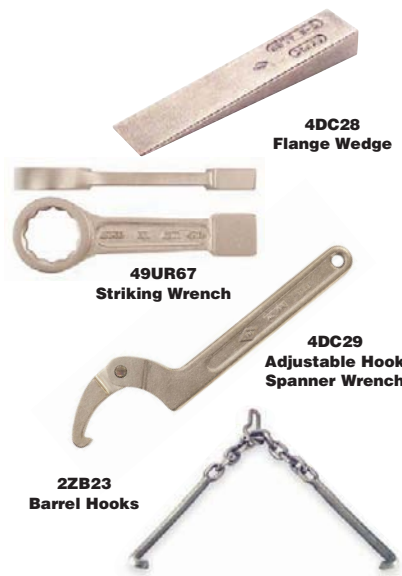

Meets NFPA 70E standard

Insulated, nonsparking hand tools protect against hazards of mechanical sparks, friction and impact sparks. Charging batteries produce hydrogen gas which is extremely flammable and is not easily detected by humans. These tools are exceptional for battery manufacturers, electrical safety consultants, and maintenance personnel who maintain battery systems, as well as those requiring uninterrupted power systems (UPS) and battery rooms for mission critical operations including government, hospitals, hazardous industrial processing and controls, data centers, computer rooms, and network operations.
