Parts Washers

Parts washers are used to keep tools and metal parts clean, so they work more efficiently and have an extended useful life. They remove dirt, oil, grease, and corrosion from metal parts.

Base-mounted parts washers have tubs that attach to stand-alone bases for easier maintenance. They can submerge vehicle parts with either water-based solutions or petroleum solvents at high-cleaning temperatures.

Benchtop parts washers are lightweight and portable. Their spigots disperse cleaning solutions, and their electric pumps recirculate solutions around wash tubs. These smaller-sized units are designed for single-component cleaning and may be used infrequently due to size constraints.

Drum-mounted parts washers sit atop drums and recirculate cleaning solutions. Solutions are mixed in the tank and pulled up from the drum onto parts sitting in the tank. Parts soak or brush clean with either solvent or water-based solutions.

Mobile parts washers have mounted wheels for easy transportation. Their drain plugs and hoses remove cleaning solutions as needed. Portable washers come with latching lids to prevent spillage, fumes, or splashing of solvents.

Cleaning Method	Tank Cap.	Load Capacity	Tank Dimensions WxDxH	Tank Material	Number of Flushing Stations	Number of Brush Stations	Series	Brand	Item No.
Base-Mounted Parts Washers									
Water-Based (Microbial)									
Bioremediation, Flush, Heat, Manual, Soak	30 gal	300 lb	22 in x 36 in x 18 in	Plastic	1	1	Biomatics	Graymills	382K82

Heavy-Duty Spray Wash Cabinets

- Water-Based solution
- High pressure Spray, and manual cleaning method

These cabinets wash very large vehicle parts, including some that may be loaded and unloaded by engine cranes. They hold up to 50 gallons of cleaning solution, come with heaters to heat the solutions, include oil skimmers, parts baskets, and heavy-duty pumps.

Tank Cap.	Load Capacity	Tank Dimensions WxDxH	Tank Material	Number of Flushing Stations	Series	Item No.
