Fuel Storage Tanks

- Steel construction
- Stackable

These fuel storage tanks enable convenient on-site refueling of diesel-powered machinery. Their double-walled construction protects the contents from the elements while preventing environmental harm due to fuel leaks.

Stationary tanks can power one piece of equipment while supplying fuel simultaneously. Up to two empty units can be stacked together.

Transportable tanks can power up to three pieces of equipment at the same time, while also supplying fuel. Their internal baffles and galvanized frame facilitate secure transporting. Three empty units, or up to two full units can be stacked together.

Liquid Transfer Tanks

Tanks are not intended for use with flammable liquids such as gasoline. L-shaped tanks are designed for use with crossover-style truck boxes. 1FEG2 combo includes removable storage chest for tools and equipment. All Weather Guard tanks are for use with diesel fuel only.
