

WESTWARD

Pruning Knife

A pruning knife makes precision cuts on greenery. The curved blade hooks onto and slices through vines, stems, twigs, and slim branches. For grafting use.

Hedge Shears

■ Steel Blade Material

Long, straight blades on hedge shears cut through multiple slim branches, twigs, and stems with a single stroke. Their long handles provide leverage to increase shearing force at the blades. They require two hands to operate.

Loppers

Loopers have extra-long handles that extend reach and increase leverage to produce powerful shearing force in their short blades. They cut through thicker branches than pruners and hedge shears and require two hands to operate.

Pruning Shears & Bypass Pruners

Pruning shears have short handles and blades designed for detailed cutting and shaping of shrubs and plants. They operate with one hand and reach areas too narrow for loopers and hedge shears. **Bypass pruners** have curved blades and work like scissors to allow clean cutting all way through the stem. These pruners cut closer to the trunk without crushing plant tissue.

**Brush Puller 9GMU4**

Brush and Log Removal Tools

BRUSH PULLERS

Clear brush with gripping teeth and strong, wide opening jaws that will not slip when engaged.

SHRUB AND CLUMP PULLERS

Feature triple chain system with no-slip gripping links that act as a choker to remove large shrubs, clumps of brush, and small trees.

ROOT CUTTER

Hardened serrated-edge blade and slide hammer cut easily through soil, removing roots without ripping up landscape. Slices roots up to 12" deep.

SKIDDING TONGS

Ideal for skidding and dragging operations. Opens to 25 in. 1.25 in.-dia. steel tongs stay sharp for a long time. Powder-coated finish.

MINI LOG GRAPPLE

Easy-to-assemble grapple with 12 teeth grabs hold of logs for skidding and lifting. Powder-coated finish provides durability. 3000 lb. capacity.
