**Shovel and Handle Types**

**SHOVEL TYPES**

**Round and Square**

Used for digging and moving materials. These shovels usually have a long, straight handle; giving you more leverage when digging. The larger blade size comes with a pointed or rounded tip and is ideally used for digging, moving, breaking, and turning soil applications.

**Scoop**

Primarily used for moving grain material. Feature deeper basin that helps prevent spillage and has a deep enough edge to help snow removal.

**Spade**

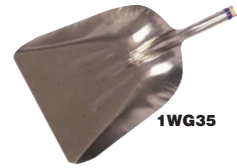

Used for removing material and creating trenches of different shapes. Spades usually have a small, straight, flat blade and a shorter shaft. They are primarily used for slicing, lifting, moving, edging, and loosening soil and roots.

**Trench**

Similar to spades and are used to dig narrow trenches.

**HANDLE TYPES**

Come in straight or D-shapes and are made from wood, fiberglass, steel, and aluminum.
